

Yaser Madadi

Senior Data Analyst & Database Specialist

Vancouver, BC | [236-999-1013](tel:236-999-1013) | YaserMadadi@hotmail.com | [GitHub](#) | [LinkedIn](#)

Professional Summary:

Senior Data Analyst & Database Specialist with 12+ years of experience delivering **data-driven insights and analytical solutions** across healthcare, pharmaceutical, manufacturing, oil & gas, and education sectors. Expert in **SQL, Databricks, ETL pipelines, and analytical data modeling**, with a strong ability to transform complex datasets into **actionable insights that support strategic decision-making**. Experienced in designing **analytics-ready databases**, optimizing queries for reporting performance, and partnering with business and technical stakeholders to turn data into **measurable business value**.

Professional Certifications:

Microsoft Certified Solution Developer, UAE, Dubai, 2007

Relational Database Design and SQL, British Columbia Institute of Technology (BCIT), Burnaby, BC, 2025

MS Azure & SQL Analytics Tools, British Columbia Institute of Technology (BCIT), Burnaby, BC, 2025 (In Progress)

Applied Data Analytics, British Columbia Institute of Technology (BCIT), Burnaby, BC, (In Progress)

Areas of Expertise:

Business Intelligence & Data Analysis:

- **SQL & Data Warehousing:** Complex query development, optimized SQL queries
- **Power BI:** Advanced data modeling (star/snowflake schema), Dashboards & KPI, Power Query, DAX, calculated columns, custom dashboards & visualizations
- **Data Integration & Governance:** Integration of ERP (Celigo), data lineage, data validation, auditing
- **Databricks & Delta Lake:** Gold-layer queries, advanced transformations
- **Data Modeling:** Star/Snowflake Schema, Normalization & Denormalization, Conceptual, Logical & Physical Modeling
- **Data Collection:** Multi-Source Data Extraction, ETL Workflow Implementation, Data Import & Export Automation
- **Analytical Skills:** Business analytics, deriving actionable insights, performance optimization, problem-solving

Databases:

- **DataBase Designing & Modeling:** Database Normalizing (BCNF) [SQL Server, Azure SQL, MongoDB]
- **T-SQL & Database Programming:** StoredProcedure, UDFs, Triggers, Assemblies, CTE, Windows Functions, Aggregation & Grouping.
- **DataBase Optimization & Performance Tuning:** Partitioning, Memory-Optimized Table, Database Health Monitoring, Fragmentation
- **Query Optimization:** Query Performance Analysis, Index Strategy, Statistics Management, Query Refactoring
- **Backup & Recovery:** Full, differential, transactional backups.
- **Data Quality & Validation:** Constraints, Triggers
- **Automations:** Job, Scheduled Scripts, Automated Task

ERP & Integration:

- Oracle Netsuite ERP, Celigo

Professional Experience:

Data Analyst & Database Specialist:

TelePain Solutions, Vancouver, BC

2023-Present

A healthcare technology company providing virtual healthcare services and digital health solutions.

Scalable Relational Database Design:

Management required a scalable database for patient records, doctor profiles, appointment scheduling, and visit history, ensuring data integrity, high performance, and maintainability.

- **Queue Management:** Implemented patient queue management database to optimize scheduling, balance clinician workload and reduced patient wait times.
- **Electronic Health Record (EHR):** Built visit history tracking features to enable clinicians to access detailed treatment records and follow-up plans, improving care continuity.
- **SQL Optimization:** Optimized SQL queries and application performance, improving response times and scalability for high-volume telehealth operations.

Power BI Reporting & Analytics:

- **Power Query Data Processing:** Performed data preparation and cleaning in Power Query, standardizing formats, handling missing values, and optimizing datasets for downstream analytics.

- *Power BI Dashboard Development:* Developed Power BI dashboards and reports using advanced DAX measures and calculated columns to provide actionable insights for clinicians and management.
- *Multi-Source Data Integration:* Integrated multiple data sources, including Azure SQL and MongoDB, with a focus on ensuring data quality, lineage, and auditability.
- *Data Accuracy & Compliance Strategy:* Ensured accurate reporting and traceability across all applications.

Tech Stack:

Azure SQL, MongoDB, Power BI, .Net 9.0,

Professional Experience:

Data Analyst & Database Specialist:

Cobel Darou Co., Tehran, Iran

2020-2023

Cobel Darou is a major pharmaceutical company in Iran, focused on the import, registration, marketing, and distribution of prescription drugs. It operates across diverse therapeutic areas including oncology, cardiovascular, and vaccines.

Data Analyst & Business Intelligence:

Designed and delivered interactive dashboards and reports that enabled management to monitor operations, analyze production, and make data-driven decisions.

- *Power BI dashboards:* Designed Power BI dashboards and reports for pharmaceutical operations, applying advanced data modeling (star/snowflake schema), using PowerQuery, DAX measures and calculated columns.
- *Business-to-Data Translation:* Translated complex business requirements into actionable metrics and dashboards, improving operational decision-making and reporting accuracy.
- *Databricks Gold Layer Design:* Designed and implemented gold-layer SQL queries using Databricks and Delta Lake principles, enabling scalable and reliable BI consumption.
- *Enterprise Data Transformation:* Applied advanced transformations to support enterprise-scale analytics and reporting.
- *Cross-System Data Integration:* Integrated data from ERP and other internal systems into a unified, reliable data model.

Database Performance Optimization:

Optimized database performance by analyzing queries, indexing critical tables, and restructuring schema to improve read/write efficiency and reduce latency.

- *Database Schema Redesign:* Redesigned and optimized database schemas, resulting in a 40% improvement in application performance.
- *Memory-Optimized Database Conversion:* Converted a large SQL Server table containing millions of records to a memory-optimized structure, resulting in dramatic performance improvements for read and write operations, significantly reducing query response times and system bottlenecks.
- *SQL Server Table Partitioning:* Implemented table partitioning in SQL Server for a large dataset, improving query performance, manageability, and system scalability, resulting in a 30% increase in data retrieval speed.
- *Enterprise Index Tuning:* Optimized SQL Server queries, indexes, and stored procedures, significantly improving database performance and reducing response times by up to 40%.
- *ADO.NET Data Access Implementation:* Designed and implemented an ADO.NET-based data access system to ensure faster and more reliable interactions between the application and the database, optimizing database access patterns while avoiding Entity Framework and direct stored procedure calls.
- *High-Volume Data Efficiency Improvement:* Analyzed query execution plans and applied indexing strategies, partitioning, and normalization techniques to enhance efficiency for high-volume transactional data.

Tech Stack:

Sql Server 2022, Azure SQL, Power Bi, DataBricks, .Net 7

Professional Experience:

Data Analyst & Database Specialist:

Saravel Co., Tehran, Iran

2011-2020

A company specializing in the design, manufacturing, and installation of HVAC systems (Heating, Ventilation, and Air Conditioning) and mechanical equipment for residential, commercial, and industrial projects.

Database & Analytics Projects:

- **Database Design & Optimization:** Designed and optimized relational databases to support production workflows, invoicing, and order management, including stored procedures, triggers, and functions, improving query performance and system reliability.
- **Data Integration & Reporting:** Developed processes to extract, transform, and load (ETL) data across multiple production and sales systems, enabling accurate reporting and analytics.

- **Performance Improvement:** Enhanced database and system performance by 50% through query tuning, indexing, and schema optimization.
- **Business Intelligence & Dashboards:** Built reporting tools and dashboards using SQL Server and Power BI to track production metrics, sales, and operational KPIs, enabling data-driven decision-making.
- **Data Accuracy & Audit:** Implemented data validation, error logging, and automated scripts to maintain high data quality and ensure accurate reporting.

Tech Stack:

Sql Server 2019, SSIS, Power Bi, .Net Core 3.2, ASP.Net Web API, Git

Education:**Bachelor of Science Degree in Mathematics:**

Shahrood University of Technology, Shahroud, Iran

1997-2002
